

ClearShield Eco-Glass® - Recommended After-Care for Interior Glass, including Mirrors and Glass Furniture*

**Please refer to the relevant After-Care guidelines for shower glass, kitchen splashbacks and sandblasted glass.*

Ritec's specialist maintenance solutions for glass are part of the world's first and only complete system for the renovation, 'non-stick', easy-clean protection and maintenance of glass surfaces. The award-winning ClearShield Eco-System® upgrades ordinary, high-maintenance glass surfaces into easy-clean ClearShield Eco-Glass®.

Keeping ordinary, unprotected glass free from air- and water-borne contaminants such as water spots, fatty residues, fingermarks and other dirt can be very difficult, if not impossible, despite regular cleaning. Avoiding greasy smear marks after cleaning is also difficult. As a result, clarity and visual appeal of the glass are spoiled.

Harsh and abrasive cleaning methods and compounds create further damage and accelerate the degradation process.

The durable and effective 'non-stick' performance of ClearShield Eco-Glass® ensures interior glass surfaces are always much easier to clean and keep clean, stain-resistant and maintain visual appeal for longer.

Recommended After-Care

To optimise the performance and durability of ClearShield Eco-Glass®, follow the recommended basic maintenance programme below.

Maintaining ClearShield Eco-Glass® on Interior Glass

- **Daily (or as required)**

Rinse / wipe off any deposits using a damp microfibre cloth.

- **Periodically**

Use **Ritec After-Care for ClearShield Glass**, highly effective to maintain the 'non-stick', easy-clean performance of ClearShield® protection.

This product quickly and efficiently removes light water spots, fatty / greasy residues, fingermarks and other general dirt from interior glass. To use:

1. Spray onto the glass surface
2. Agitate with a T-bar or sponge
3. Rinse thoroughly with water
4. Squeegee dry

Ritec After-Care for ClearShield Glass can be purchased from www.clearshield.biz.

For stubborn water spot deposits caused by limescale / mineral salts, we recommend the use of **Ritec Limescale Remover**. Visit www.clearshield.biz or contact us for more information.

Ritec After-Care for ClearShield Glass is not suitable for sandblasted glass.

Glass protected for life

ClearShield Eco-Glass® performs indefinitely if a simple re-application is carried out once its performance becomes noticeably reduced in terms of ease of cleaning and resistance to staining. The professional re-application can be carried out in-situ by a specialist applicator. Please contact us for more details.
